

Dear Dr. Jones:

Thank you for attending the Biomax Informatics Master Class held at the NHS Informatics and Innovative Technologies conference on September 19.

As presented by Dr. Klaus Heumann, the BioXM Knowledge Management Environment delivers a semantic integration platform that can be configured by domain experts in a flexible way to bring innovative and quantifiable improvements in health care service delivery. The BioXM system offers an agile solution development tool to address virtually any complex project where large and diverse datasets must be utilised in decision-making processes. Building on the experience obtained from the highly successful application of the BioXM system to the integration and analysis of large clinical datasets in COPD, leading to significant outcome improvement [1], we will apply the system's capabilities and lessons learned to other therapeutic areas.

We look forward to co-developing with you concrete plans for the application of informatics and knowledge management to address your operational challenges. We have the resources and accumulated experience to understand your objectives, and importantly, avoid pitfalls and oversights to ensure the configuration of efficient and cost-effective solutions.

The National Health Service is committed to transforming the way in which information is utilised for a better delivery of healthcare within the UK. The challenges ahead require cooperative, multidisciplinary approaches. Biomax has already made great progress in developing and implementing the knowledge management software needed to drive projects to successful outcomes. We look forward to participating in the NHS Information Revolution with you.

For more information, to discuss case studies and/or to initiate a consultation, please contact me, your Biomax representative located in the United Kingdom.

Best regards,
